

LBT-301 Mysteries Of Gasoline Direct Injection

Gasoline Direct Injection (GDI) is the new wave of the future being implemented in cars of today. In this new class called "Mysteries of GDI," Ron Bilyue dissects the mechanical and electrical components in this high-pressure fuel deliver system, explains the benefits and drawbacks and examines the differences in manufacturer methods. Ron predicts by 2018 every engine that runs on petrol will be GDI. It is the only way vehicle manufacturers can reach a corporate average fuel economy and reach cold engine emissions.

This class is over an hour long, is available streaming online and comes with a supplemental study guide and a full length knowledge assessment.

Runtime: 65 minutes

Topics Covered

- High Pressure Fuel Delivery Methods
- Advantages and Disadvantages to GDI
- Component examination
- Trouble Shooting and Diagnostics
- Scan Tool Diagnostics and Tuning
- Common Issues
- GDI Future Predictions

Supplements

- Videos
- Online Manual
- Certificate of Completion
- Quizzes
- Discussion Forum
